Team Name

TLATeX

Project

ReconTEXTualization

Team Sponsor

Chris Ortiz

Team Mentor

Smirthya Iyer

Team Members

Tyler Carver

Aron Gebrezghr

Evelyn Torres

Introduction

The purpose of this document is to formally document and outline the team members' roles, team meetings expectations, tools and documentation standards, and team self review.

Team Members and Roles

This section lists the roles of the team members and the responsibilities that come with each role.

Team Meeting Expectations

This section outlines the details of the meeting and conduct the members should follow. The section also lists processes for multiple scenarios of misconduct.

Tools and Documentation Standards

The section outlines the details of tools, how it will be used and processes related to review of deliverables created with tools.

Team Self Review

This section reports on the team's internal self-review agenda and process.

Team Members and Roles

Tyler Carver is team leader and release manager.. Team leaders are responsible for coordinating tasks assignments, run meetings and make initial efforts to resolve conflicts among the group. As team leader, he is responsible for customer communication as well. Customer communicator coordinates and conducts communications with customers. As release manager, he coordinates the project's versioning and branching.

Aron Gebrezghr in charge of the team's website. He is responsible for coding and deploying the team's website. Gebrezhr is also code reviewer for the group. Code reviewers are responsible for code reviews and cleaning up commit logs for accuracy, readability, and understandability.

Evelyn Torres is recorder and editor. She is responsible for recording the team's meeting minutes and is responsible for documentation as well. As editor, she is responsible for editing and formatting documents to ensure consistency and quality.

All members of the team are expected to have a role in producing code and are expected to work on presentations as a group.

Team Meeting Expectations

Team Meeting Information

Mandatory weekly team meetings take place in the Steven Sanghi College of Engineering building at 11: 00 am on Fridays.

The agenda structure starts with a team discussion on what each team member has accomplished before the meeting. Then, there is a discussion about what needs to be done during the meeting and during the week. At this time, team members can collaborate to work on a task together..

Finally, the team discusses future plans. In this discussion, the members break down steps and assign members roles to complete for the next week.

Meetings are recorded by the recorder. The document must contain a heading with time, date and location. Under the heading is a list of team members present. Bullet points will list details of the discussion points and assignments given to the team members to complete.

Two unexcused absences successively lead to a warning from the team that the third unexcused will lead the team to email a memorandum to team mentor and capstone coordinator. Third unexcused absence will result in the team having sent an email to team mentor and capstone coordinator after the meeting and informing the member of the email.

Impromptu meetings are made through text message. Team members are to be notified the day before. There is no penalty for members who can not attend.

Team Conduct

Meetings are expected to remain on topic and focused. Team members must work productively and respectfully with each other. Decisions are made with a majority vote. Interpersonal disputes should be resolved between team members involved in the issue. Members are encouraged to calmly discuss the issue and communicate objectively. If the team members can not resolve the issue between themselves, another team member can act as a mediator.

Non-participating members are defined to the team when a member does not do deliverables assigned to them and go to the mentor and team meeting. Members are given one warning and asked to have a meeting with team members to discuss issues. Skipping the discussion meeting or repeating behavior the following week will result in the team contacting the team mentor and capstone coordinator.

Team members that bypass review or try to enforce their vision will receive two warnings. In the second warning, team members will be told that the next breach of conduct will lead to the team contacting the team mentor and capstone coordinator.

Tools and Documentation Standards

The team plans on using GitHub to share, maintain and manage the codebase. Issue tracking will also take place on GitHub. Messages describing changes or issues must be clear and precise. The team can create as many branches for the project. The main branch on the repository is the final branch that the team submits for review by the sponsor.

Google Docs and Google Slides are preferred tools for word processing and creating presentations. Graphical designs are made in Canva. Team members are to turn in drafts in the teams format as close to the established format as possible. The draft must be done before twenty-four hours. The editor needs to review and edit the format at least a day before the deadline to review documents.

Team Self Review

Team self review occurs at the first meeting of the month. Team members are to come prepared with information about tasks they have done the past month. In a circle, each team member discusses tasks they have completed and milestones reached in the project. Each team member talks about their core strengths and personal achievements of the last month. Then, team members discuss challenges that come with the tasks. Team members discuss steps and solutions to overcome challenges in the future. Finally, the team looks at future goals. Goals follow the SMART model. Goals are specific, measurable, achievable, relevant and time-bound. The team writes down their SMART goal and shares it with the team.
